

Macintosh Print File Downloader Installation and Removal Instructions ReadMe

This ReadMe file contains instructions for installing the Print File Downloader (PFD) on Macintosh OS X systems. The PFD provides the user interface to download PostScript and PDF print-ready files and to specify the print features for these files. You must have a printer installed on your system to print files using the PFD.

The PFD can be installed on the Macintosh operating systems 10.3 and later.

There is one installer folder inside the "Product Name" folder called PFDM10_XX_YYYY, where XX is the company name abbreviation and YYYY is the version number. The minimum requirement is Mac OS version 10.3. The installer folder contains the package, <Product Name> Print File Downloader Installer.pkg.

The installer supports a multi-language install. When a user logs into the OS, the installer is presented the preferred language user interface. If this release does not support the selected preferred language, the default language is English.

Before proceeding, verify with your *Macintosh* administrator that you have the appropriate privileges to install the PFD. You must also install the PPD or Custom PostScript Printer Driver prior to installing the PFD.

To install the Print File Downloader on Macintosh OS X:

1. Select the appropriate package extension with .pkg to start the install process and follow the instructions in the installer.
2. Launch the "Printer Setup Utility" application. The application is located in /Applications/Utilities.
3. Select Add from the tool bar.
4. Select IP Printing from the menu.
5. Enter the printer's IP address. You can find out the IP address for the printer at the printer.
6. Enter a Queue Name. You can find out the Queue Name at the printer.
7. Select the company name from the "Printer Model" list.
8. Select a PPD for the product.
9. Select Add.

Data Files Locations

- The PFD is located in *computer name/Applications/company name/product name*. The *company* and *product* names represent the manufacturer's printer.
- The system default template is located in */Users/username/Library/Preferences/company name/product name*. The template format is in XML. Using a text editor, you can open the file for reading.
- The Paper Catalog and its data files are located in */Library/Application Support/company name/product name*.

To remove the Print File Downloader from Macintosh OS X:

On Macintosh OS X, you do not have to remove the old version of the PFD from the system before installing the new PFD. You can overwrite the old version during installation of the new version. However, if you want to remove the PFD, you can drag the PFD files from the location indicated in the ***Data Files Locations*** section above to the Trash icon.
